

Force measuring cell

Flat shape, with small structural dimensions

METRON®

Application:

Particularly suitable for static and quasi-static force measurement of clamping forces. Due to the small size, it is ideally suited for smaller vices.

Execution:

- Analogue manometer, diameter 100mm with trailing pointer
- Force measuring cell made from stainless steel
- Incl. factory inspection log

Advantage:

- Secure base due to flat shape
- High-quality stainless steel design

Delivery:

Force measuring cell incl. work calibration certificate, in plastic case

Art. no.	44425 830
Brand	METRON
Manufacturer Part Number	SKM 40_ D30/4
Model	SKM 40
Min./max. force of measuring range	0-40 kN
Scale value, force	2 kN
Outer diameter force transducer	65 mm
Overall height of force sensor	55 mm
Piston diameter	29 mm
Protruding piston height	4 mm
Distance between contact surface and centre of piston	22 mm
Mean distance between manometer and force sensor	103 mm
Distance Contact Surface to the middle of the pressure gauge	125 mm
Error limit, based on end value	+/- 1 %
Manometer diameter	100 mm
Gross Weight	1.800 kg
Product Group	4CE
