PCN Title: AD9144 Die Revision and Data Sheet Update
Publication Date: 02-Apr-2015
Effectivity Date: 01-Jul-2015 *(the earliest date that a customer could expect to receive changed material)*

Revision Description:

Initial Release

Description Of Change

Die Revision Change: Re-wire current mirrors of some blocks (JESD PLL, DAC PLL, temperature sensor) to 1.2V supply.

Data Sheet Update (unrelated to die revision change): Minimum SERDES operating frequency values have increased. See supporting document for data sheet specification comparisons.

Reason For Change

Die Revision Change: Several current mirrors of some blocks (JESD PLL, DAC PLL, temperature sensor) have current sources that are connected to 3.3V supply rails. In some power-down conditions, this may allow some 1.2V drains to float to 3.3V.

Data Sheet Update: SERDES operating frequency ranges are being updated to reflect actual device performance.

Impact of the change (positive or negative) on fit, form, function & reliability

Die Revision Change: The change prevents 1.2V drains to float to 3.3V.

Data Sheet Update: The new minimum SERDES operating frequency limits are slightly higher.

Product Identification *(this section will describe how to identify the changed material)*

Die Revision Change: Revision ID register 0x006 = 0x06.

Summary of Supporting Information

Qualification will be performed per ADI0012, Procedure for Qualification of New or Revised Processes. See attached Qualification Plan.
