

2-point precision internal measuring instrument set for holes

Mitutoyo

Application:

For precise measuring of bores using the 2-point method. Turning and/or moving the device in the hole makes it possible to detect deviations from roundness or cylindricity.

Execution:

- With automatic centring via a centring bridge
- Contact points made of carbide
- Replaceable washers (T=0.5 mm) for adjusting the measuring instrument are supplied as standard accessories

Advantage:

- A long piston stroke ensures amazing accuracy.
- A large handle reduces heat transfer from the operator by 50%.

Delivery:

Includes box, dial gauge, plastic protector for dial gauges
