### SPECIFICATIONS

pH value: 8,0 (10% solution)  
 Contains: surfactants, hardness binders and alcohol

### TEVAN TIPS

#### Protecting your floors

In addition to an effective daily cleaning, it is important to protect your floors from dirt and damage. Use Floorline 3 or 4 to protect your floor so that your floor stays in a good condition longer.

#### Floor strippers

When protective layers are damaged, you will no longer be able to clean your floor properly. Use Floorline 5 to remove old protective layers so that you can replace them with a new protective layer.

#### Rinse with water

Always rinse thoroughly with water after cleaning. This will prevent the build-up of residues and the retention of loose dirt.
