#### MLV41-54-G/25/70/123/136

Retroreflective sensor with 5-pin, M9 x 0.5 connector

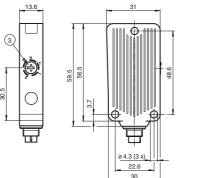

### **Features**

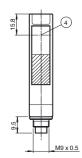

- Rugged series in corrosion-resistant metal housing
- Reliable recognition of reflective objects and clear glass
- Two machines in one: clear object detection or reflection operating mode with long range
- TEACH-IN switch for setting the contrast detection levels
- Automatic adjustment in case of soiling in contrast detection mode
- Resistant against noise: reliable operation under all conditions

### **Product information**

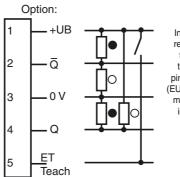

The unique and extremely popular design of the MLV41 series enables it be mounted correctly in confined areas and offers all the functions that are normally only found on larger phototelectric sensors. The MLV41 series comes with a range of functions. For example, highly visible status LEDs on the front and back, resistance to ambient light, crosstalk protection and universally applicable output stages that permit every possible switching logic and polarity to be realized. The enhanced resistance to ambient light ensures reliable operation even where modern energy-saving lamps with electronic ballasts are in use. The same applies where multiple devices are present, i.e. the use of a number of sensors in the same vicinity causes no problems.

# Instructions for the Teach-In mode:

Step	Switch position	LED green	LED yellow	Time/ Frequency	Explanations/ Remarks
1	N	on	flashes	4/s	In switch position "N" aligned with reflector.
					Reflector detected without functional reserve.
	N	on	on	-	In switch position "N" aligned with reflector.
					Reflector detected with functional reserve (recommended).
2	Т	off/on	on	200 ms	A new switch position is indicated by the green LED going out briefly.
					This applies also for the selection of the other switch positions.
	Т	flashes	flashes	2.5/s	Slow alternating flashing: Teach-In process correctly executed.
					Max. duration of the Teach-In process: 2 s
	Т	flashes	flashes	8/s	Rapid alternating flashing: Teach-In process <b>not correctly</b> executed. (e.g. receiver signal not sufficient, sensor not correctly aligned with reflector).
					Status is terminated by turning switch to position N.
3/1	1	on	on	-	Contrast detection 10 % is activated. (e.g. clean PET bottles filled with water)
3/2	II	on	on	-	Contrast detection 18 % is activated. (e.g. bottles made of clear glass)

3/3	Ш	on	on	-	Contrast detection 40 % is activated.
					(e.g. tinted glass or intransparent materials)

# **Ext. TEACH input:**

In switch position "T" it is possible to trigger a Teach-In process and to select the corresponding contrast detection level by the external application of a High pulse of a certain width:

I: 50 ms (30 ... 80 ms)
II: 150 ms (120 ... 180 ms)
III: 250 ms (220 ... 280 ms)
N: 350 ms (320 ... 380 ms)
