

Chain Tensioners SPANN-BOY® TS, for Roller Chains DIN ISO 606 (formerly DIN 8187)

Material: Housing from steel, zinc-plated, black lacquered.
Chain rider from ultra-high-molecular polyethylene PE-UHMW.

Material Version Stainless: Housing from stainless steel.

These very low, ready-to-install tensioners enable noise reduction and wear reduction at chain drives.

- Needed space below chain only 40 mm.
- With two springs of different force, which can get activated separately or together. So it is possible to adjust three different tensioning forces.
- Usable travel about 40 mm.
- Interchangeable with similar parts of other suppliers.

Temperature range: -20°C to +60°C (short time up to +80°C).

Chain Tensioners SPANN-BOY® TS-EP, for Roller Chains DIN ISO 606 (formerly DIN 8187)

Material: Housing from steel, zinc-plated, black lacquered.
Chain rider from ultra-high-molecular polyethylene PE-UHMW.

These ready-to-install chain tensioners enable quiet, low-wear running of roller chains under varying operating conditions, for example at changing angle of the chain drive.

- Needed space below chain only 40 mm.
- With two springs of different force, which can get activated separately or together. So it is possible to adjust three different tensioning forces.
- Usable travel about 40 mm.
- Interchangeable with similar parts of other suppliers.

Temperature range: -20°C to +60°C (short time up to +80°C).

Adjustable Tensioning Forces:

The SPANN-BOY® TS and the SPANN-BOY® TS-EP has two different springs: one with low force and one with high force. These springs can get activated separately or together. So it is possible to adjust three different tensioning forces:

Only the low-force spring activated: 65 - 33 N.

Only the high-force spring activated: 125 - 63 N.

Both springs together activated: 190 - 96 N.

Mounting example:

Elliptical, 180° rotating chain slide profile.

If one side of the slider is worn, the slider can be turned to use its other side.
