APPLICATION CIRCUIT

This series has been tested according to the following recommended circuits (Figures 1 & 2) before leaving the factory. If you want to further reduce the input and output ripple, you can increase the input and output capacitors or select capacitors of low equivalent series resistance (ESR) provided that the capacitance is less than the maximum capacitive load of the model.

TRIM FUNCTION

Figure 4
Trim Function for Output Voltage Adjustment (open if unused)

Calculating Trim Resistor Values:

$$RT = \frac{a R2}{R2 - a} - R3$$

$$a = \frac{Vref}{Vo' - Vref} \cdot R1$$

$$RT = \frac{a R1}{R1 - a} - R3$$

$$a = \frac{Vo' - Vref}{Vref} \cdot R2$$

Note:
RT = Trim Resistance
a = Self-defined parameter with no real meaning
Vo' = desired output voltage
