

## DECLARACIÓN DE PRESTACIONES

**fischer** innovative solutions

no 0007 – ES

1. Código de identificación única del producto tipo: **resina FIS V**

2. Usos previstos:

producto	Uso/s previsto/s
anclaje metálico para fijación de grandes cargas en hormigón	para anclar y/o apoyar elementos portantes de hormigón o elementos constructivos pesados, tales como revestimientos y falsos techos, Véase el apéndice, especialmente los anexos B 1 - B 8

3. Fabricante: **fischerwerke GmbH & Co. KG, Otto-Hahn-Straße 15, 79211 Denzlingen, Germany**

4. Representante autorizado: --

5. Sistemas de evaluación y verificación de la constancia de las prestaciones (EVCP): **1**

6a. Norma armonizada: ---

Organismos notificados: ---

6b. Documento de evaluación europeo: **ETAG 001; 2013-04**Evaluación técnica europea: **ETA-02/0024; 2015-01-07**Organismo de evaluación técnica: **DIBt**Organismos notificados: **1343 – MPA Darmstadt**

7. Prestaciones declaradas:

**Resistencia mecánica y estabilidad (BWR 1)**

indicación esencial	Prestaciones
valores característicos para el dimensionado según el Informe Técnico TR 029	Ver anexo, especialmente anexo C 1 - C 6
valores característicos para el dimensionado según CEN/TS 1992-4:2009	Ver anexo, especialmente anexo C 7 - C 12
desplazamientos bajo solicitudes a tracción y a cortante	Ver anexo, especialmente anexo C 13, C 14

**protección contra incendios (BWR 2)**

indicación esencial	Prestaciones
Reacción al fuego	Los anclajes cumplen los requisitos para la Clase A1
resistencia al fuego	sin resistencia determinada (SRD)

8. Documentación técnica adecuada o documentación técnica específica: ---

Las prestaciones del producto identificado anteriormente son conformes con el conjunto de prestaciones declaradas. La presente declaración de prestaciones se emite, de conformidad con el Reglamento (UE) no 305/2011, bajo la sola responsabilidad del fabricante arriba identificado.

Firmado por y en nombre del fabricante por:

## Specific Part

### 1 Technical description of the product

The fischer injection system FIS V is a bonded anchor consisting of a cartridge with injection mortar fischer FIS V and a steel element. The steel element consist of

- a fischer threaded rod FIS A or RGM of sizes M6 to M30 or
- a internal threaded anchor RG MI of sizes M8 to M20 or
- a deformed reinforcing bar of sizes  $\phi = 8$  to 28 mm or
- a fischer rebar anchor FRA of sizes M12 to M24

The steel element is placed into a drilled hole filled with injection mortar and is anchored via the bond between metal part, injection mortar and concrete.

The product description is given in Annex A.

### 2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

### 3 Performance of the product and references to the methods used for its assessment

#### 3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance for design according to TR 029	See Annex C 1 to C 6
Characteristic resistance for design according to CEN/TS 1992-4:2009	See Annex C 7 to C 12
Displacements under tension and shear loads	See Annex C 13 / C 14

#### 3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Anchorages satisfy requirements for Class A1
Resistance to fire	No performance determined (NPD)

**3.3 Hygiene, health and the environment (BWR 3)**

Regarding dangerous substances there may be requirements (e.g. transposed European legislation and national laws, regulations and administrative provisions) applicable to the products falling within the scope of this European Technical Assessment. In order to meet the provisions of Regulation (EU) No 305/2011, these requirements need also to be complied with, when and where they apply.

**3.4 Safety in use (BWR 4)**

The essential characteristics regarding Safety in use are included under the Basic Works Requirement Mechanical resistance and stability.

**3.5 Protection against noise (BWR 5)**

Not applicable.

**3.6 Energy economy and heat retention (BWR 6)**

Not applicable.

**3.7 Sustainable use of natural resources (BWR 7)**

The sustainable use of natural resources was not investigated.

**3.8 General aspects**

The verification of durability is part of testing the essential characteristics. Durability is only ensured if the specifications of intended use according to Annex B are taken into account.

**4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base**

According to Decision of the Commission of 24 June 1996 (96/582/EC) (OJ L 254 of 08.10.96 p. 62-65), the system of assessment and verification of constancy of performance (see Annex V and Article 65 Paragraph 2 to Regulation (EU) No 305/2011) given in the following table applies.

<b>Product</b>	<b>Intended use</b>	<b>Level or class</b>	<b>System</b>
Metal anchors for use in concrete (heavy-duty type)	For fixing and/or supporting concrete structural elements or heavy units such as cladding and suspended ceilings	—	1

	Temperature range II	-40°C to +120°C		(max. long term temperature +72°C and max. short term temperature +120°C)								

**Base materials:**

- Reinforced or unreinforced normal weight concrete according to EN 206:2013
- Strength classes C20/25 to C50/60 according to EN 206:2013

**Use conditions (Environmental conditions):**

- Structures subject to dry internal conditions (zinc coated steel, stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist (stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure and to permanently damp internal condition, if other particular aggressive conditions (high corrosion resistant steel)  
Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).

**Design:**

- Anchorages have to be designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.).
- Anchorages under static or quasi-static actions are designed in accordance with TR 029 "Design of bonded anchors", Edition September 2010 or CEN/TS 1992-4:2009

**Installation:**

- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.

Minimum spacing $s_{\text{min}}$ [mm]		40	45	55	60	65	85	110	130
Minimum edge distance $c_{\text{min}}$ [mm]		40	45	55	60	65	85	110	130
Minimum thickness of concrete member	$h_{\text{min}}$ [mm]	$h_{\text{ef}} + 30 \geq 100$			$h_{\text{ef}} + 2d_0$				

<sup>1)</sup> Both drill bit diameters can be used.

#### Reinforcing bar

**Properties of reinforcement:** refer to EN 1992-1-1 Annex C, Table C.1 and C.2N

Product form		Non-zink-plated bars and decoiled rod	
Class		B	C
Characteristic yield strength $f_{yk}$ or $f_{0,2k}$ [MPa]		400 to 600	
Minimum value of $k = (f_t/f_{yk})$		$\geq 1,08$	$\geq 1,15$ $< 1,35$
Characteristic strain at maximum force $\varepsilon_{uk}$ [%]		$\geq 5,0$	$\geq 7,5$
Bentability property		Bend / Rebendtest	
Maximum deviation from nominal mass (individual bar) [%]	Nominal bar size [mm]	$\leq 8$	$\pm 6,0$
		$> 8$	$\pm 4,5$
Bond: Minimum relative rib area, $f_{R,\text{min}}$ (determination acc. to EN 15630)	Nominal bar size [mm]	8 to 12	0,040
		$> 12$	0,056

#### Rib height $h$ :

The rib height  $h$  must be:  $0,05 * d \leq h \leq 0,07 * d$        $d$  = nominal bar size

#### fischer injection system FIS V

**Intended Use**  
Installation parameters reinforcing bars

**Annex B 4**

>+30	to	+40		35	30	+40		2	4

<sup>1)</sup> For wet concrete or flooded hole the curing time must be doubled.

### Installation instructions part 1

#### Drilling and cleaning the hole

1		Drill the hole. Drill hole diameter $d_0$ and drill hole depth $h_0$ see Tables B2, B3, B4, B5.
2		$h_{ef} \leq 12d$ and $d_0 < 18$ mm: Blow out the drill hole four times by hand.
		$h_{ef} > 12d$ and/or $d_0 \geq 18$ mm: Blow out the drill hole four times, using oil-free pressure air ( $p > 6$ bar).
3		Brush the drill hole four times using an adequate steel brush (see Table B6).
4		$h_{ef} \leq 12d$ and $d_0 < 18$ mm: Blow out the drill hole four times by hand.
		$h_{ef} > 12d$ and/or $d_0 \geq 18$ mm: Blow out the drill hole four times, using oil-free pressure air ( $p > 6$ bar).

#### Preparing the cartridge

5		Twist off the sealing cap.
6		Twist on the static mixer (the spiral in the static mixer must be clearly visible).
7		Place the cartridge into the dispenser.
8		Press out approx. 10 cm of mortar until the resin is permanent grey in colour. Mortar which is not grey in colour will not cure and must be disposed of.

#### fischer injection system FIS V

**Intended Use**  
Installation instructions part 1

**Annex B 7**

**Installation instructions part 2****Injection of the mortar****9**

Fill approx... 2/3 of the drill hole with mortar. Always begin from the bottom of the hole to eliminate voids.

For drill hole depth  $\geq 150$  mm use an extension tube.

**Installation fischer anchor rods or internal threaded anchors RG MI****10**

Only use clean and oil-free anchor elements. Press the anchor rod or internal threaded anchor RG MI down to the bottom of the hole, turning it slightly while doing so. After inserting the anchor element, excess mortar must emerge around the anchor element.

For overhead installation support the anchor element with wedges.

For push-through installation fill the annular gap also with mortar.

**11**

Wait for the specified curing time  
 $t_{cure}$  see Table B7.

**12**

Mounting the fixture  
 $T_{inst,max}$  see Tables B2 or B3

**Installing reinforcing bars and fischer rebar anchors FRA****10**

Only use clean and oil-free rebars. Mark the reinforcing bar for setting depth. Using a turning movement, push the reinforcing bar or FRA vigorously into the filled hole up to the insertion depth marking. When reaching the setting depth marking surplus mortar must emerge around the anchor.

**11**

Wait for the specified curing time  
 $t_{cure}$  see Table B7.

**12**

Mounting the fixture  
 $T_{inst,max}$  see Table B5

**fischer injection system FIS V****Intended Use**
