## Direct Mounting L-Support Rail Kits For Enclosures & Cabinets

### Looking to mount your non 19-inch mountable appliances into LMS Data enclosures?

The new range of **L-Support Rails** allow mounting of common equipment and appliance products including compatible CCTV, networking, peripherals and server devices directly into the enclosure.

Manufactured of high-grade, powder coated steel as a set of two rails, they have an approximate load capacity of 15Kgs static load. The L-Rails not only have an exact 90-degree shape but also feature both direct and 'slotted' cage holes so precise fitment can be assured\*

Offered in three depths to fit cabinets up to around 1000mm deep, the kits are ideal for most of the LMS Data EcoNetCab family of enclosures, both general networking and of course server types.

**enclosures - power distribution - cabling**

**EcoNetCab**
