

PRODUCT/PROCESS CHANGE NOTIFICATION

PCN IPD/13/7945
Dated 18 Jun 2013

**Capacity expansion, for the product housed in TO-220
package at the Nantong Fujitsu Microelectronics (China)
Subcontractor plant**

Table 1. Change Implementation Schedule

Forecasted implementation date for change	10-Sep-2013
Forecasted availability date of samples for customer	11-Jun-2013
Forecasted date for STMicroelectronics change Qualification Plan results availability	11-Jun-2013
Estimated date of changed product first shipment	17-Sep-2013

Table 2. Change Identification

Product Identification (Product Family/Commercial Product)	see attached list
Type of change	Assembly additional location
Reason for change	To improve service to ST Customers
Description of the change	To respond the ever increasing demand for the products housed in TO-220 package, ST is glad to announce the expansion of capacity at Nantong Fujitsu Microelectronics (China) Subcontractor factory, For the complete list of the part numbers affected by this change, please refer to the attached Products List
Change Product Identification	will be ensured by the first two digits of the traceability code ("GF")
Manufacturing Location(s)

**Assembly and Testing capacity expansion, for the product housed in
TO-220 package,
at the Nantong Fujitsu Microelectronics (China) Subcontractor plant.**

Packages typology

WHAT:

To respond the ever increasing demand for the products housed in TO-220 package, ST is glad to announce the expansion of capacity at Nantong Fujitsu Microelectronics (China) Subcontractor factory,
For the complete list of the part numbers affected by this change, please refer to the attached Products List

Samples, are available right now upon request for immediate customer qualification, while the full availability of products will be granted from wk 22 2013 onwards,

WHY:

- To improve service to ST Customers

HOW:

By expanding capacity according the ST quality and reliability standard.

The changed here reported will not affect the electrical, dimensional and thermal parameters keeping unchanged all information reported on the relevant product's datasheets.
There are as well no modifications in the packing modes nor in the standard delivery quantities either it may affect ST's Customers assembly methods.

Qualification program and results:

The qualification program consists mainly of comparative electrical characterization and reliability tests. Please refer to Appendix 1 for all the details.

WHEN:

Production start and first shipments will occur as indicated in the table below.

Affected Product Types	Samples	1 st Shipment
PowerMOSFET	Now	Wk22
Power Bipolar	Now	Wk22
Thyristor & Triac	Now	Wk22
Rectifier	Now	Wk22

Marking and traceability:

Unless otherwise stated by customer specific requirement, the traceability of the parts assembled in the Nantong Fujitsu Microelectronics Subcontractor factory, will be ensured by the first two digits of the traceability code (“GF”).

Lack of acknowledgement of the PCN within 30 days will constitute acceptance of the change. After acknowledgement, lack of additional response within the 90 day period will constitute acceptance of the change (Jedec Standard No. 46-C).

In any case, first shipments may start earlier with customer’s written agreement.

Reliability Report

Assembly and Testing capacity expansion, for the product housed in TO-220 package, at the NFME (China) Subcontractor plant.

General Information		Locations	
Product Lines:	ED7K / EZ66	Wafer Diffusion Plants:	<i>ED7K: Global Foundries EZ66: AngMoKio (SINGAPORE)</i>
Product Families:	Power MOSFET	EWS Plants:	<i>ED7K: Global Foundries EZ66: AngMoKio (SINGAPORE)</i>
P/Ns:	STP140NF75 (ED7K) STP10NK60Z (EZ66)	Assembly plant:	<i>NFME CHINA</i>
Product Group:	IMS - IPD	Reliability Lab:	<i>IMS-IPD Catania Reliability Lab.</i>
Product division:	Power Transistor Division		
Package:	TO-220		
Silicon Process techn.:	PowerMOSFET - StripFET™

3 RELIABILITY EVALUATION OVERVIEW

3.1 Objectives

Qualification of the TO-220 package graded Molding Compound manufactured in the NFME (China) Subcontractor assy plant.

3.2 Conclusion

Qualification Plan requirements have been fulfilled without exception. It is stressed that reliability tests have shown that the devices behave correctly against environmental tests (no failure). Moreover, the stability of electrical parameters during the accelerated tests demonstrates the ruggedness of the products and safe operation, which is consequently expected during their lifetime.

6 ANNEXES 6.0

6.1 Tests Description

Test name	Description	Purpose
HTRB High Temperature Reverse Bias HTGB High Temperature Forward (Gate) Bias	The device is stressed in static configuration, trying to satisfy as much as possible the following conditions: <ul style="list-style-type: none">• low power dissipation;• max. supply voltage compatible with diffusion process and internal circuitry limitations;	To determine the effects of bias conditions and temperature on solid state devices over time. It simulates the devices' operating condition in an accelerated way. To maximize the electrical field across either reverse-biased junctions or dielectric layers, in order to investigate the failure modes linked to mobile contamination, oxide ageing, layout sensitivity to surface effects.
HTSL High Temperature Storage Life	The device is stored in unbiased condition at the max. temperature allowed by the package materials, sometimes higher than the max. operative temperature.	To investigate the failure mechanisms activated by high temperature, typically wire-bonds solder joint ageing, data retention faults, metal stress-voiding.
AC Auto Clave (Pressure Pot)	The device is stored in saturated steam, at fixed and controlled conditions of pressure and temperature.	To investigate corrosion phenomena affecting die or package materials, related to chemical contamination and package hermeticity.
TC Temperature Cycling	The device is submitted to cycled temperature excursions, between a hot and a cold chamber in air atmosphere.	To investigate failure modes related to the thermo-mechanical stress induced by the different thermal expansion of the materials interacting in the die-package system. Typical failure modes are linked to metal displacement, dielectric cracking, molding compound delamination, wire-bonds failure, die-attach layer degradation.
H3TRB Temperature Humidity Bias	The device is biased in static configuration minimizing its internal power dissipation, and stored at controlled conditions of ambient temperature and relative humidity.	To evaluate the package moisture resistance with electrical field applied, both electrolytic and galvanic corrosion are put in evidence.
TF / IOL Thermal Fatigue / Intermittent Operating Life	The device is submitted to cycled temperature excursions generated by power cycles (ON/OFF) at T ambient.	To investigate failure modes related to the thermo-mechanical stress induced by the different thermal expansion of the materials interacting in the die-package system. Typical failure modes are linked to metal displacement, dielectric cracking, molding compound delamination, wire-bonds failure, die-attach layer degradation.

3 RELIABILITY EVALUATION OVERVIEW

3.1 Objectives

The objective of this report is to qualify new subcontractor for TO-220AB (3 leads) package for Rectifiers devices

The product series currently involved in this qualification are listed below.

Product sub-Family	Commercial product
Rectifiers	STPSxxxCT STTHxxxCT

Specific devices not expressly listed in the above table are included in this change.

The reliability methodology used follows the JESD47-E: « Stress Test Driven Qualification Methodology ».

The following reliability tests ensuing are:

- HTRB to evaluate the risk of contamination.
- THB to verify there is no apparition of corrosion and risk of moisture penetration.
- TC,RSH and IOLT to ensure the mechanical robustness of the products.
- Solderability to verify good wettability on leads

3.2 Conclusion

Qualification Plan requirements have been fulfilled without exception. Reliability tests have shown that the devices behave correctly against environmental tests (no failure). Moreover, the stability of electrical parameters during the accelerated tests demonstrates the robustness of the products and safe operation, which is consequently expected during their lifetime.

6.2 Tests description

Test name	Description	Purpose
Die Oriented		
HTRB High Temperature Reverse Bias	The device is stressed in static configuration, trying to satisfy as much as possible the following conditions: low power dissipation; max. supply voltage compatible with diffusion process and internal circuitry limitations;	To determine the effects of bias conditions and temperature on solid state devices over time. It simulates the devices' operating condition in an accelerated way. To maximize the electrical field across either reverse-biased junctions or dielectric layers, in order to investigate the failure modes linked to mobile contamination, oxide ageing, layout sensitivity to surface effects.
Package Oriented		
TC Temperature Cycling	The device is submitted to cycled temperature excursions, between a hot and a cold chamber in air atmosphere.	To investigate failure modes related to the thermo-mechanical stress induced by the different thermal expansion of the materials interacting in the die-package system. Typical failure modes are linked to metal displacement, dielectric cracking, molding compound delamination, wire-bonds failure, die-attach layer degradation.
THB Temperature Humidity Bias	The device is biased in static configuration minimizing its internal power dissipation, and stored at controlled conditions of ambient temperature and relative humidity.	To evaluate the package moisture resistance with electrical field applied, both electrolytic and galvanic corrosion are put in evidence.
PCT Pressure Pot	The device is stored in saturated steam, at fixed and controlled conditions of pressure and temperature.	To investigate corrosion phenomena affecting die or package materials, related to chemical contamination and package hermeticity.
IOLT	All test samples shall be subjected to the specified number of cycles. When stabilized after initial warm-up cycles, a cycle shall consist of an "on" period, when power is applied suddenly, not gradually, to the device for the time necessary to achieve a delta case temperature (delta is the high minus the low mounting surface temperatures) of +85°C (+60°C for thyristors), followed by an off period, when the power is suddenly removed, for cooling the case through a similar delta temperature. Auxiliary (forced) cooling is permitted during the off period only. Heat sinks are not intended to be used in this test, however, small heat sinks may be used when it is otherwise difficult to control case temperature of test samples, such as with small package types (e.g., TO39).	The purpose of this test is to determine compliance with the specified numbers of cycles for devices subjected to the specified conditions. It accelerates the stresses on all bonds and interfaces between the chip and mounting face of devices subjected to repeated turn on and off of equipment and is therefore most appropriate for case mount style (e.g., stud, flange, and disc) devices.

Test name	Description	Purpose
RSH	The device is submitted to a dipping in a solder bath at 260°C with a dwell time of 10s. Only for through hole mounted devices.	This test is used to determine whether solid state devices can withstand the effects of the temperature to which they will be subjected during soldering of their leads. The heat is conducted through the leads into the device package from solder heat at the reverse side of the board. This procedure does not simulate wave soldering or reflow heat exposure on the same side of the board as the package body.
SD	The device is aged in a wet and dry bath of solder. A preconditioning test is included in this test method, which degrades the termination finish to provide a guard band against marginal finish.	To test whether the packaging materials and processes used during the manufacturing operations process produce a component that can be successfully soldered to the next level assembly using tin lead eutectic solder

Please Read Carefully:

Information in this document is provided solely in connection with ST products. STMicroelectronics NV and its subsidiaries ("ST") reserve the right to make changes, corrections, modifications or improvements, to this document, and the products and services described herein at any time, without notice.

All ST products are sold pursuant to ST's terms and conditions of sale.

Purchasers are solely responsible for the choice, selection and use of the ST products and services described herein, and ST assumes no liability whatsoever relating to the choice, selection or use of the ST products and services described herein.

No license, express or implied, by estoppel or otherwise, to any intellectual property rights is granted under this document. If any part of this document refers to any third party products or services it shall not be deemed a license grant by ST for the use of such third party products or services, or any intellectual property contained therein or considered as a warranty covering the use in any manner whatsoever of such third party products or services or any intellectual property contained therein.

UNLESS OTHERWISE SET FORTH IN ST'S TERMS AND CONDITIONS OF SALE ST DISCLAIMS ANY EXPRESS OR IMPLIED WARRANTY WITH RESPECT TO THE USE AND/OR SALE OF ST PRODUCTS INCLUDING WITHOUT LIMITATION IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE (AND THEIR EQUIVALENTS UNDER THE LAWS OF ANY JURISDICTION), OR INFRINGEMENT OF ANY PATENT, COPYRIGHT OR OTHER INTELLECTUAL PROPERTY RIGHT.

UNLESS EXPRESSLY APPROVED IN WRITING BY TWO AUTHORIZED ST REPRESENTATIVES, ST PRODUCTS ARE NOT RECOMMENDED, AUTHORIZED OR WARRANTED FOR USE IN MILITARY, AIR CRAFT, SPACE, LIFE SAVING, OR LIFE SUSTAINING APPLICATIONS, NOR IN PRODUCTS OR SYSTEMS WHERE FAILURE OR MALFUNCTION MAY RESULT IN PERSONAL INJURY, DEATH, OR SEVERE PROPERTY OR ENVIRONMENTAL DAMAGE. ST PRODUCTS WHICH ARE NOT SPECIFIED AS "AUTOMOTIVE GRADE" MAY ONLY BE USED IN AUTOMOTIVE APPLICATIONS AT USER'S OWN RISK.

Resale of ST products with provisions different from the statements and/or technical features set forth in this document shall immediately void any warranty granted by ST for the ST product or service described herein and shall not create or extend in any manner whatsoever, any liability of ST.

ST and the ST logo are trademarks or registered trademarks of ST in various countries.

Information in this document supersedes and replaces all information previously supplied.
