Features

- 1-channel isolated barrier
- 24 V DC supply (Power Rail)
- · Potentiometer input
- Current output 0 mA ... 20 mA
- · Lead resistance compensation adjustment
- Accuracy 0.05 %
- Up to SIL2 acc. to IEC 61508

Function

This isolated barrier is used for intrinsic safety applications. It provides the source voltage to a potentiometer and transfers its wiper position from hazardous areas to safe areas. It then converts the signal to a 0 mA ... 20 mA current output.

The unit can be used in a 3-, 4-, or 5-wire configuration depending on the required measurement accuracy. Terminals 2 and 5 are used as the sense line for the potentiometer lead resistance compensation in a 5-wire configuration.

The barrier's potentiometer can be used to compensate for lead resistance up to 5 % of the hazardous area potentiometer value.

Connection

General specifications		
Signal type		Analog input
Supply		
Connection		Power Rail or terminals 11+, 12-
Rated voltage	U_n	20 35 V DC
Ripple		within the supply tolerance
Power loss		1 W
Power consumption		1.3 W
Input		
Connection		terminals 4-, 5-, 3+, 2+, 1+
Potentiometer		
Types of measuring		3-, 4-, 5-wire technology
Nominal resistance		$\geq 800 \Omega$
Supply voltage		approx. 4.7 V
Lead resistance		5 % of the potentiometer resistance (adjustable)
Output		
Connection		terminals 7-, 8+
Current output		0 20 mA, load ≤1 kΩ
Transfer characteristics		
Deviation		
Linearity		≤±10μA
Influence of ambient temperature		≤ 1 µA/K
Rise time		10 to 90 % ≤ 8 ms; 10 to 90 % within 1 % of span ≤ 25 ms
Electrical isolation		
Output/power supply		functional insulation, rated insulation voltage 50 V AC
Directive conformity		, o
Electromagnetic compatibility	v	
Directive 2004/108/EC		EN 61326-1:2006
Conformity		E11010E0 1.E000
•		NE 21:2006
Electromagnetic compatibility		IEC 60529:2001
Degree of protection		
Protection against electrical shock		UL 61010-1
Ambient conditions		
Ambient temperature		-20 60 °C (-4 140 °F)
Mechanical specifications		
Degree of protection		IP20
Mass		approx. 120 g
Dimensions		20 x 107 x 115 mm (0.8 x 4.2 x 4.5 in) , housing type B1
Mounting		on 35 mm DIN mounting rail acc. to EN 60715:2001
Data for application in con	nection

Additional information

Jumpers must be used on terminals 1, 2 and 4, 5 in 3-wire configurations. A jumper must be used between terminals 4 and 5 in 4-wire connections. In the 5-wire mode of operation, the potentiometer voltage is measured at terminals 2 and 5 and automatically readjusted.

The front side potentiometer can be used to compensate for lead resistances up to 5 % of the potentiometer value. During adjustment, the potentiometer is set to 100 % of its value and the output signal is adjusted to 100 % of the required value. This adjustment can be repeated setting the potentiometer to 0 %.

Accessories

Power feed module KFD2-EB2

The power feed module is used to supply the devices with 24 V DC via the Power Rail. The fuse-protected power feed module can supply up to 150 individual devices depending on the power consumption of the devices. Collective error messages received from the Power Rail activate a galvanically-isolated mechanical contact.

Power Rail UPR-03

The Power Rail UPR-03 is a complete unit consisting of the electrical insert and an aluminium profile rail 35 mm x 15 mm. To make electrical contact, the devices are simply engaged.

Profile Rail K-DUCT with Power Rail

The profile rail K-DUCT is an aluminum profile rail with Power Rail insert and two integral cable ducts for system and field cables. Due to this assembly no additional cable guides are necessary.

Power Rail and Profile Rail must not be fed via the device terminals of the individual devices!
