

Red Laser Enhancement Glasses

To compliment our wide range of alignment laser modules we have introduced a new range of Laser Enhancement Glasses which enhance projections in the red wavelength range (630nm to 670nm) by blocking light in other wavelengths, thus improving the visibility in outdoors or bright lighting condition's. The glasses also meet ANSI Z87 impact standard.

A wide range of styles are available and all models are covered by a lifetime warranty, based on the quality and structure of the components used which are of the highest level of quality.

Please note these are not laser safety glasses, but are conventional safety glasses that enhance the visibility of red wavelengths and do not protect the wearer's eye from the laser. It is recommend that these glass are only used with lasers were the output power conforms to class 2 and 2M.

Features

- Enhances visibility in the Wavelength range 630nm to 670nm
- Improves visibility in sunlight or bright lighting condition
- Lifetime Warranty
- Adjustable frame size
- Available from stock
- Competitive pricing
- Meets ANSI Z87 impact standards
