Effective Legacy VGA Display Connectivity Solutions

Have existing VGA/SVGA displays and need to connect them to current, HDMI only systems?

The new **C-VGA-HDMI-AUX** is a compact, self powered HDMI to VGA converter that simply connects into almost any computer, be it Windows(tm), Mac(tm), Linux(tm) and almost any display graphic card or video out, enabling existing VGA or SVGA monitors, projectors of the like to function as they had been intended, with a compatible VGA video signal.

Unlike competing systems, the LMS Data C-VGA-HDMI-AUX features a proven high-conductivity gold plated HDMI compliant connector, connected to a small flex cable to reduce strain from the connected displays. Integral phono port enables 2-channel audio is required.

Fully compatible, female VGA/SVGA input together with screw-down VGA mount sockets enable a robust connection.

Ideal for business, education, broadcast and indeed any application that needs legacy VGA display connectivity with your existing HDMI outputs.

specifications:

High-Quality HDMI to VGA Adapter - Plug n' Play

Use legacy VGA monitors, projectors on HDMI output

Integral AUX port for stable power if needed*

Integral 3.5mm phono port - supports 2 channel audio*

Supports up to 1080p automatically

Ideal for desktop area extensions for two monitors

Driverless - ideal for Windows(tm), Mac(tm), Linux(tm) etc

* Some functions are hardware dependent
