

JBC DR560 Desoldering Iron

[Product Application Map](#)

[News](#)

DR560 Desoldering Iron is used for **desoldering jobs of through-hole components and removing excess solder after SMD rework**. It can provide up to 160W.

JBC Most Efficient Soldering System and the suction power from MSE or MVE pumps ensure the optimum quality of work performed.

The solder container is made of glass, in order to see when it needs to be cleaned, and when it needs a filter replacement.

DR560 uses C560 Tip Range with internal diameters of 0.6 - 3 mm. Some tips are specially designed for cleaning traces of tin from PADS.

TRY IT!**

REFERENCE

DR560-A

SPECIFICATIONS

ESD safe

Meet ANSI/ESD S20.20-2021

PRODUCT COMPOSITION

- 1 DR560 Desoldering Iron (C560003 already inserted)

WEIGHT AND DIMENSIONS

559 gr (1.23 lb)

306 x 131 x 71 mm
