

HEXBUG® Scarab Micro Robotic Creatures

The **HEXBUG® Scarab** is an exceptionally high-speed, mechanical, beetle-like robotic bug that skitters around on six angled legs. The high energy micro robotic creature propels itself forwards and backwards, and is capable of popping from its back to its feet if placed upside down. The Scarab's lifelike behavior is eerily mesmerizing to watch and interact with. Packed with advanced design and engineering, each Scarab has an inner body loaded with robotic intelligence, protected by a hard, transparent exoskeleton casing.

How does it work?

The **HEXBUG Scarab** moves so frenetically that it is nearly impossible to follow without a slow motion camera. The combination of the HEXBUG Scarab's six specially designed angular legs, coupled with its lightning speed, make it easy for it to propel against obstacles in its path and flip over if caught on its back. Three button cell batteries are included.

The HEXBUG Scarab fits in the palm of your hand for miniature fun at anytime!

- Product Length: 2.5 inches
- Product Width: 3.25 inches
- Product Height: 1.6 inches
- Product Weight: .8 ounces

Available in an assortment of five translucent colors including: Green, Blue, Orange, Black and Red.

- MSRP \$14.99
