

- Profile rail simply snap-on

Rail holders, into which the profile rail is clipped, are available for rapid installation of the aluminium profile rail. The rail holders are available in two different versions.

The screw-on holder is bolted to the substructure, the holder for fitting in a C profile is designed for installation in a C profile rail (30 mm x 32 mm). The suspension distance for the aluminium profile rail must not exceed 1.5 m (min. 3 rail holders per 5 m section) for both upright and suspended mounting. If it is mounted horizontally, we recommend a suspension distance of 1.25 m (4 rail holders per 5 m rail).
