

# AIR PREPARATION SYSTEM

## P31, P32, P33 & P3Y SERIES

Modular & Body Ported 1/4 to 3/4

Body Ported 3/4 & 1, with port Blocks 1 1/4 & 1 1/2

### DECLARATION OF COMPLIANCE (ROHS)

European Directive 2011/65/EU – RoHS (Restriction of certain Hazardous Substances in electrical and electronic equipment), restricts the use of the 6 substances in the manufacture of specified electrical equipment.

**Lead:** Product containing lead and its compound (except for applications of lead as an alloying element by weight in steel up to 0.35%, in aluminium up to 0.4% and in copper alloys up to 4% and in circuit board solder) must not exceed 0.1% by weight

**Mercury:** The concentration level must not exceed 0.1% by volume

**Cadmium:** The concentration level must not exceed 0.01% by volume

**Hexavalent Chromium:**

This is a corrosive protective finish used on our product line. Where this finish is utilized the Chromate solution is Hexavalent (Chrome 6) free.

**Polybrominated Biphenyls (PBB):**

The concentration level must not exceed 0.1% by weight. This substance is not known to be in any of our products.

**Polybrominated Diphenyl Esters (PBDE):**

The concentration level must not exceed 0.1% by weight. This substance is not known to be in any of our products.

Global Air Preparation products supplied by Parker Hannifin have been designed and manufactured in accordance with "sound engineering practice", as defined by Article 3 of Pressure Equipment Directive 97/23/EC.

Global Air Preparation product range is in compliance with REACH to ensure continued compliance additions to the list of SVHC (Substance of Very High Concern) are reviewed periodically.

Global Air Preparation product range has been third party Shock & Vibration tested independently in accordance to EN 61373: 1999, Category 2

### ATEX

Following Ignition Hazard Assessments performed on the non-electrical Global Air Preparation products they are in accordance with the requirements of EN 13463-1:2009, it was considered that the equipment does not contain its own source of ignition, and therefore is not within the scope of directive 94/9/EC.

The products can be used in a Group II Category 2 environment assuming that the ATEX Directive and the following conditions are complied with:

- Installation and maintenance of the product must be undertaken by qualified personnel.
- Do not mount the products in an area where impact may occur.
- Filters must be used to limit the introduction of particles and to capture particles generated in service.
- Supply air quality must be within ISO 8573-1:2010 Class 6.4.4.
- Maximum working temperature to be as stated on product label.
- WARNING – pulsating pressure and/or a closed circuit can generate heat.
- Deposits of dust on the product must not exceed 5mm thickness.  
Refer to technical file for surface areas of plastics. The unit must be earthed via the compressed air supply line.
- The unit must not come into contact with liquid solvents, acids or alkalis.  
Refer to technical file for chemicals known to be incompatible.  
Product cleaning must be undertaken using a method complying with the specifications of the ATEX zone, preferably by using mild soap and water or antistatic products.
- Regulators, Filter Regulators:  
Do not use Regulators or Filter Regulators within systems that can create vibration within the Regulator / Filter Regulator unit.
- Solenoid Operated Valves:  
Are suitable for use in an ATEX environment, (Group II Category 2) providing ATEX approved solenoids are fitted.
- Technical file available on request.

Global Air Preparation product range has been designed and tested in accordance with ISO flow testing, envelope integrity, and catalog data presented.

- Filters – ISO 5782-1 & ISO 5782-2: 1997
- Regulators- ISO 6953-1 & ISO 6953-2: 2000
- Lubricators- ISO 6301-1 & ISO 6301-2: 2009

### WARNING – USER RESPONSIBILITY

**FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.**

- This document and other information from Parker-Hannifin Corporation, its subsidiaries and authorized distributors provide product or system options for further investigation by users having technical expertise.
- The user, through its own analysis and testing, is solely responsible for making the final selection of the system and components and assuring that all performance, endurance, maintenance, safety and warning requirements of the application are met. The user must analyze all aspects of the application, follow applicable industry standards, and follow the information concerning the product in the current product catalog and in any other materials provided from Parker or its subsidiaries or authorized distributors.
- To the extent that Parker or its subsidiaries or authorized distributors provide component or system options based upon data or specifications provided by the user, the user is responsible for determining that such data and specifications are suitable and sufficient for all applications and reasonably foreseeable uses of the components or systems.

### SALE CONDITIONS

The items described in this document are available for sale by Parker Hannifin Corporation, its subsidiaries or its authorized distributors. Any sale contract entered into by Parker will be governed by the provisions stated in Parker's standard terms and conditions of sale (copy available upon request).

# Parker Global Air Preparation System

**Global.**  
**Modular.**

Performance you need,  
**wherever** you need it.

Full featured particulate and coalescing filters, regulators, filter/regulators, and lubricators are available with a wide range of standard options to meet air preparation needs.

The comprehensive Global Air Preparation System is available in three body sizes with either BSPP (EMEA) or NPT (US) to accommodate thread type requirements.

Individual units can easily be assembled into various combinations, utilizing patented modular lightweight body connectors.

# Fully Modular Air Preparation System

- Mixity beween sizes P32 and P33 by using same mountings.
- Extended air ports sizes by adding end port blocks or for converting from BSPP body threaded to NPT.

n With end blocks  
q Body threaded

# Global Comprehensive Offering

**P31 Mini Series**  
1/4" ports  
40mm body width

**P32 Compact Series**  
1/4", 3/8" and 1/2"  
60mm body width

**P33 Standard Series**  
1/2" and 3/4"  
73mm body width

## Filters

- 5μ particulate, 1.0μ and 0.01μ coalescing, and adsorber available as standard
- Transparent or metal bowl with manual or auto float drains standard

## Regulators

- Available as stand alone, common port and electronic proportional
- Both relieving and non-relieving versions available

## Filter / Regulators

- Compact design for space savings
- Available with all the same standard options as the filters and regulators

## Lubricators

- Proportional oil delivery over a wide range of air flows
- Fill under pressure

## Combinations

- Compact design for space savings
- Easily assembled
- Many configurations available

## Accessories

- Solenoid operated soft start, quick dump, and soft start/quick dump valves
- Manifold blocks
- Ball style lockout / shutoff valve
- Repair kits, gauges, etc.

# P3Y Comprehensive Offering

**P3Y Series**  
3/4" and 1"  
90mm body width

## Filters

- 5μ particulate, 1.0μ and 0.01μ coalescing, and adsorber available as standard
- Polypropylene bowl with metal screw in bowl guard

## Regulators

- Available as a stand alone high flow unit with a rolling diaphragm to extend life
- Optional key lock

## Filter / Regulators

- Compact design for space savings
- Available with all the same standard options as the filters and regulators

## Lubricators

- Proportional oil delivery over a wide range of air flows
- Fill under pressure

## Combinations

- Compact design for space savings
- Easily assembled

## Accessories

- Solenoid operated soft start, quick dump, and soft start/quick dump valves
- Manifold blocks
- Ball style lockout / shutoff valve
- Repair kits, gauges, etc.

# Complete Air Preparation

## P31 Mini Series

40mm body width

1/4" Ported

| Flows up to:     | scfm | (dm <sup>3</sup> /s, ANR) |
|------------------|------|---------------------------|
| Filter           | 25   | (12)                      |
| Coalescer        | 7.5  | (3.6)                     |
| Regulator        | 68   | (32)                      |
| Filter/Regulator | 74   | (35)                      |
| Lubricator       | 52   | (25)                      |

Features:

- Space saving integral gauge
- Manifold style regulators available
- OSHA compliant shut-off valves
- Soft-Start & Quick Dump valves
- Electronic Proportional Regulator

## P32 Compact Series

60mm body width

1/4", 3/8", &amp; 1/2" Ported

| Flows up to:     | scfm | (dm <sup>3</sup> /s, ANR) |
|------------------|------|---------------------------|
| Filter           | 82   | (39)                      |
| Coalescer        | 36   | (17)                      |
| Regulator        | 165  | (78)                      |
| Filter/Regulator | 164  | (77)                      |
| Lubricator       | 90   | (42)                      |

Features:

- Manifold style regulators available
- OSHA Compliant shut-off valves
- Soft-Start & Quick Dump valves
- Electronic Proportional Regulator

## P33 Standard Series

73mm body width

1/2" &amp; 3/4" Ported

| Flows up to:     | scfm | (dm <sup>3</sup> /s, ANR) |
|------------------|------|---------------------------|
| Filter           | 102  | (48)                      |
| Coalescer        | 42   | (20)                      |
| Regulator        | 233  | (110)                     |
| Filter/Regulator | 235  | (109)                     |
| Lubricator       | 150  | (71)                      |

Features:

- OSHA Compliant shut-off valves
- Soft-Start & Quick Dump valves (Utilizes P32 size only)
- Electronic proportional regulator (Utilizes P32 size only)

## P3Y Large Series

90mm body width

3/4" and 1" Ported

| Flows up to:     | scfm | (dm <sup>3</sup> /s, ANR) |
|------------------|------|---------------------------|
| Filter           | 170  | (80)                      |
| Coalescer        | 307  | (150)                     |
| Regulator        | 550  | (260)                     |
| Filter/Regulator | 465  | (220)                     |
| Lubricator       | 390  | (184)                     |

Features:

- OSHA Compliant shut-off valves
- Soft-Start & Quick Dump valves
- Electronic Proportional Regulator

# Complete FRL System

## Safety Exhaust Valves

- External monitoring provides a cost and space saving advantage
- Solid state pressure sensors provide accurate, fast fault detection
- Quick visual LED indicators on the front of the valve
- Safety exhaust outlet is no-maintenance and non-clog by design
- Suitable for stand alone use (optional soft start) or modular mounting to P32 or P33 FRL assembly

## Semi Precision Regulators and Filter / Regulators

- Available in P32 compact series
- Fine adjustment sensitivity
- Good repeatability and minimal pressure drop
- Good flow capacity
- Light gray knob for easy identification

## Common Port Manifold Regulators

- Multiple output pressures (P2, P3, P4, etc.) with common inlet (P1)
- Available in two sizes P31 and P32
- Balanced valve design for accurate pressure regulation
- Outlet pressure ports in front and rear of unit
- Multiple spring ranges available

## Optional Tamperproof Kits

- One facilitates the permanent tamperproofing of the Regulator and Filter/Regulator units
- Hinged black part clamps over control knob and is locked in place after sliding yellow cover over it
- Other allows for removable lockout/tagout tamperproofing
  - Four pad lock location holes tagout
  - Hinged locking clamp secures over existing knob via yellow cover which is slid over into place

## Electronic Proportional Regulators

- Electro-Pneumatic regulator
- Integrated systems control
- Accurate output pressure
- Micro parameter settings
- Selectable I/O parameters
- Quick, full flow exhaust
- LED display indicates output pressure
- No air consumption in steady state
- Multiple mounting options
- Protection to IP65

P31P Mini Series

P32P Compact Series

## Additional Options

(Consult factory for availability)

- T-Handle
- Preset and Tamperproof
- Preset
- Pressure Limiter

# Together we can power your application with clean, dry air

Fast cycle times, high product quality, and low downtime all require a clean, dry pneumatic system to function properly. Parker has what it takes to make sure pneumatic systems perform at their best.

## Clean, dry pneumatic systems with Parker Global Air Preparation

|                                               |                                                                                                                                   |                                                                                                                    |                                                                                       |                                                                                     |                                                                                                                         |                                                                                     |

| <b>Application</b>                            | All pneumatic systems                                                                                                             | Basic pneumatic systems                                                                                            | Basic pneumatic systems                                                               | Systems requiring highest quality air.                                              | Systems requiring air with reduced moisture content                                                                     | Systems requiring highest quality air for critical applications                     |
| <b>Description</b>                            | Air leaving the compressor room at 93°C (200°F) releases 95% of its moisture into the piping system when it cools to 38°C (100°F) | Removes bulk liquid contamination and protects filters where excess cooling takes place in the distribution piping | Removes solid particulates down to 5 micron, and the separation of bulk contaminants. | Removes liquid aerosols and submicron particulates (not vapor) down to 0.01 micron. | Removes water vapor from air stream. Dew point reduced down to 4°C (40°F) (refrigeration) or -40°C (-40°F) (desiccant). | Removal of odors and trace vapors for critical applications.                        |

# Clean Dry Air

## 6

Refrigeration, membrane and desiccant dryers lower the air's dew point by removing water vapor, providing appropriately dry air for the downstream application.

## 7

Hydrocarbon and oil vapors are removed using filters utilizing activated carbon. These airborne hydrocarbons are often left over from the compressor oils.

## Specifying air quality (purity) in accordance with ISO8573-1:2010, the international standard for compressed air quality

ISO8573-1 is the primary document used from the ISO8573 series as it is this document which specifies the amount of contamination allowed in each cubic metre of compressed air.

ISO8573-1 lists the main contaminants as Solid Particulate, Water and Oil. The purity levels for each contaminant are shown separately in tabular form, however for ease of use, this document combines all three contaminants into one easy to use table.

| ISO8573-1:2010<br>CLASS | Solid Particulate                                                              |                |              |                                            | Water                          |                            | Oil                                   |
|-------------------------|--------------------------------------------------------------------------------|----------------|--------------|--------------------------------------------|--------------------------------|----------------------------|---------------------------------------|

### Specifying air purity in accordance with ISO8573-1:2010

When specifying the purity of air required, the standard must always be referenced, followed by the purity class selected for each contaminant (a different purity class can be selected for each contamination if required).

An example of how to write an air quality specification is shown below:

#### ISO 8573-1:2010 Class 1.2.1

ISO 8573-1:2010 refers to the standard document and its revision, the three digits refer to the purity classifications selected for solid particulate, water and total oil. Selecting an air purity class of 1.2.1 would specify the following air quality when operating at the standard's reference conditions:

#### Class 1 - Particulate

In each cubic metre of compressed air, the particulate count should not exceed 20,000 particles in the 0.1 - 0.5 micron size range, 400 particles in the 0.5 - 1 micron size range and 10 particles in the 1 - 5 micron size range.

#### Class 2 - Water

A pressure dewpoint (PDP) of -40°C or better is required and no liquid water is allowed.

#### Class 1 - Oil

In each cubic metre of compressed air, not more than 0.01mg of oil is allowed. This is a total level for liquid oil, oil aerosol and oil vapour.

### ISO8573-1:2010 Class zero

- **Class 0 does not mean zero contamination.**
- **Class 0 requires the user and the equipment manufacturer to agree contamination levels as part of a written specification.**
- **The agreed contamination levels for a Class 0 specification should be within the measurement capabilities of the test equipment and test methods shown in ISO8573 Pt 2 to Pt 9.**
- **The agreed Class 0 specification must be written on all documentation to be in accordance with the standard.**
- **Stating Class 0 without the agreed specification is meaningless and not in accordance with the standard.**
- **A number of compressor manufacturers claim that the delivered air from their oil-free compressors is in compliance with Class 0.**
- **If the compressor was tested in clean room conditions, the contamination detected at the outlet will be minimal. Should the same compressor now be installed in typical urban environment, the level of contamination will be dependent upon what is drawn into the compressor intake, rendering the Class 0 claim invalid.**
- **A compressor delivering air to Class 0 will still require purification equipment in both the compressor room and at the point of use for the Class 0 purity to be maintained at the application.**
- **Air for critical applications such as breathing, medical, food, etc typically only requires air quality to Class 2.2.1 or Class 2.1.1.**
- **Purification of air to meet a Class 0 specification is only cost effective if carried out at the point of use.**

# Application Guide

**FRL to Valve:** The chart below contains recommendations for the correct selection of Global Air Preparation units to suit the number and size of valves in a typical application.

|                    | P31 Mini Series                                                                   |   |   |   |   | P32 Compact Series                                                                |   |                      |   |    |    | P33 Standard Series                                                                 |    |    |    |    |

**Actuator to FRL:** The chart below contains recommendations for the correct selection of Global Air Preparation units suitable for each cylinder size. If you have a tube length over 2 m, choose one tube size larger than the chart. The table is based on a Maximum cylinder speed of 0.5m/s

| Cyl Ø mm<br>Cyl Ø inches                 |    | Cylinder bore size                                                                  |              |              |             |            |                                                                                     |               |               |               |                                                                                       |               |             |                                                                                       |             |

**Note:** Data listed above is simply a guideline for a typical application only. Proper sizing and correct flow requirements must be taken into account.

P31 Particulate Filter – Mini

- Integral 1/4" ports (NPT & BSPP)
- High efficiency 5 micron element as standard
- Excellent water removal efficiency
- Robust but lightweight aluminum construction
- One hand operation for easy element cartridge removal
- Positive bayonet latch to ensure correct & safe fitting

## P31 Coalescing and Adsorber Filters – Mini

- Integral 1/4" ports (NPT & BSPP)
- Removes liquid aerosols and sub micron particles
- Oil free air for critical applications, such as air gauging, pneumatic instrumentation and control
- Positive bayonet latch to ensure correct and safe fitting
- Adsorbing activated carbon element removes oil vapors and most hydrocarbons

**Note:** To optimize the life of coalescing element, it is advisable to install a P31F pre-filter with a 5 micron element upstream of the coalescing filter.

To optimize the life of an Adsorber it is advisable to install a P31 Coalescing Filter upstream of the Adsorber. Adsorber element should be replaced approximately every 1000 hours of service.

| Weight:                   |     | 0.37 lb (0.17 kg)                                                                   |

\* Inlet pressure 145 psig (10 bar). Secondary pressure 91.3 psig (6.3 bar) and 14.5 psig (1 bar) pressure drop.

\*\* Non-gauge option only.

† Units with square gauges: 5°F to 150°F (-15°C to 65.5°C)

Gauge supplied with every part. Gauge can be installed on the front or back of the regulator. If no gauge is installed, both seal screws must be installed.

## Flow Charts

## P31RB 1/4" Regulator

## WARNING

Product rupture can cause serious injury.  
Do not connect regulator to bottled gas.  
Do not exceed Maximum primary pressure rating.

## CAUTION:

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

**NOTE:** 1.20 in. (30mm) hole required for panel nut mounting.

Square gauge supplied with every part. Gauge can be installed on the front or back of the regulator. If no gauge is installed, both seal screws must be installed.

P31 Common P1 Regulators – Mini

- Manifold style regulator with line pressure on both sides
- Pressure output is at front or rear
- Inlet port 1/4" (NPT & BSPP)
- Working port 1/8"
- Robust construction
- Secondary pressure ranges
- Secondary aspiration plus balanced poppet provides quick response and accurate pressure regulation
- Relieving & non-relieving types
- Non-rising knob

Self relieving regulator with gauge

Non-relieving regulator

| Port Size | Description (relieving) | Gauge  | Part Number        |
|-----------|-------------------------|--------|--------------------|
| 1/4"      | 125 psig (8 bar)        | Square | <b>P31HB12BNTP</b> |

\* Inlet pressure 145 psig (10 bar). Secondary pressure 91.3 psig (6.3 bar) and 14.5 psig (1 bar) pressure drop.  
Gauge supplied with every part. Gauge can be installed on the front or back of the regulator. If no gauge is installed, both seal screws must be installed.

## Flow Charts

### P31HB 1/4" Common Regulator

### WARNING

**Product rupture can cause serious injury.  
Do not connect regulator to bottled gas.  
Do not exceed Maximum primary pressure rating.**

### CAUTION:

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

**NOTE:** 1.20 in. (30mm) hole required for panel nut mounting.

Square gauge supplied with every part. Gauge can be installed on the front or back of the regulator. If no gauge is installed, both seal screws must be installed.

## P32 Regulators – Compact

- Integral 1/4", 3/8" or 1/2" ports (NPT & BSPP)
- Robust but lightweight aluminum construction
- Secondary pressure ranges
- Secondary aspiration plus balanced poppet provides quick response and accurate pressure regulation
- Relieving & non-relieving types
- Regulator will reverse flow as standard
- Non-rising knob
- Available T-handle

Self relieving regulator  
with gauge

Non-relieving regulator

| Port Size | Description (relieving) | Gauge | Part Number        |

## Material Specifications

|                    |                        |
|--------------------|------------------------|
| Body               | Aluminum               |
| Adjustment knob    | Acetal                 |
| Bonnet             | Glass-filled nylon     |
| Diaphragm assembly | Nitrile / Zinc         |
| Valve assembly     | Brass / Nitrile        |
| Springs            | Steel, stainless steel |
| Seals              | Nitrile                |
| Panel nut          | Acetal                 |

## Repair and Service Kits

|                                        |                  |
|----------------------------------------|------------------|
| Panel mount nut - aluminum             | <b>P32KA00MM</b> |
| Panel mount nut - plastic              | <b>P32KA00MP</b> |
| Angle bracket (attaches via panel nut) | <b>P32KB00MR</b> |
| T-bracket with body connector          | <b>P32KA00MT</b> |
| T-bracket                              | <b>P32KA00MB</b> |
| Body connector                         | <b>P32KA00CB</b> |

**WARNING**

**Product rupture can cause serious injury.  
Do not connect regulator to bottled gas.  
Do not exceed Maximum primary pressure rating.**

**CAUTION:**

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

mm (Inches)

**NOTE:** 1.90 in. (48mm) hole required for panel nut mounting.

## Flow Charts

## P32RB 1/4" Regulator

## P32RB 3/8" Regulator

## P32RB 1/2" Regulator

## Gauges

|                  |                       |                    |
|------------------|-----------------------|--------------------|
| 50mm (2") round  | 0-60 psig / 0-4 bar   | <b>P6G-ERB2040</b> |
| 1/4" center back | 0-160 psig / 0-14 bar | <b>P6G-ERB2140</b> |
| mount            | 0-300 psig / 0-20 bar | <b>P6G-ERB2200</b> |

For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

P32HB Common Port Regulator

WARNING

Product rupture can cause serious injury.  
Do not connect regulator to bottled gas.  
Do not exceed Maximum primary pressure rating.

CAUTION:

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

Gauges

<sup>†</sup> Factory setting is 0-10 V control signal. 4-20 mA control signal available via parameter 4 on keypad.

D) Digital PNP output only, no analog output selectable

P) Digital PNP and analogue 0-10V outputs selectable, by means of parameter 6. (Factory default 0-10V)

N) Digital NPN and analog 0-10 V outputs selectable by means of parameter 6. Factory default 0-10V)

M) Analog 4-20mA output only.

Note: On all analog outputs the F.S. value can be adjusted by means of parameter 8.

Most Popular

## Technical Information

### Accuracy

+/- 1.0% of F.S.\*

\* Full scale (F.S.) - For 2 bar (29 psig) versions this will be 2 bar (29 psig), for the 10 bar (145 psig) version full scale will be 10 bar (145 psig).

### Air consumption

No consumption in stable regulated situation.

### Display

The regulator is provided with a digital display, indicating the output pressure, either in bar or psig.

The factory setting is as indicated on the label, can be changed through to software at all times (parameter 14)

### Supply voltage

24 VDC +/- 10%

### Power consumption

Max. 1.1W with unloaded signal outputs

### Control signals

The electronic pressure regulator can be externally controlled through an analogue control signal of either 0-10V or 4-20mA. (parameter 4).

### Output signals

As soon as the output pressure is within the signal band a signal is given of 24VDC, PNP Ri = 1 kOhm

Outside the signal band this connection is 0V.

### Connections

(In case of output signal (Option D)

Central M12 connector 4-pole

The electrical connections are as follows:

| Pin No. |           | Function                          | Color |
|---------|-----------|-----------------------------------|-------|
| 1       | 24 V      | Supply                            | Brown |
| 2       | 0 to 10 V | Control Signal Ri = 100k $\Omega$ | White |
|         | 4 to 20mA | Control Signal Ri = 500 $\Omega$  |       |
| 3       | 0 V (GND) | Supply & Set Point Ground         | Blue  |
| 4       | 24 V      | Alarm Output Signal               | Black |

| Diaphragm assembly | Stainless Steel / Nitrile |
| Panel nut          | Acetal                    |

**WARNING**

**Product rupture can cause serious injury.  
Do not connect regulator to bottled gas.  
Do not exceed Maximum primary pressure rating.**

**CAUTION:**

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

## P32 Filter / Regulators – Compact

- Integral 1/4", 3/8" or 1/2" ports (NPT & BSPP)
- High efficiency 5 micron element as standard
- Excellent water removal efficiency
- Robust but lightweight aluminum construction
- Positive bayonet latch to ensure correct & safe fitting
- Secondary pressure ranges
- Secondary aspiration plus balanced poppet provides quick response and accurate pressure regulation

## Material Specifications

|                                   |                        |
|-----------------------------------|------------------------|
| Body                              | Aluminum               |
| Adjustment knob                   | Acetal                 |
| Element retainer / baffle         | Acetal                 |
| Plastic bowl                      | Polycarbonate          |
| Metal bowl                        | Aluminum               |
| Bowl guard                        | Nylon                  |
| Filter element                    | Sintered polyethylene  |
| Seals                             | Nitrile                |
| Springs                           | Steel, stainless steel |
| Valve assembly                    | Brass / nitrile        |
| Diaphragm assembly Nitrile / zinc |                        |
| Panel nut                         | Acetal                 |
| Sight gauge                       | Nylon                  |

## Repair and Service Kits

|---------------------------------------------|-------------------|
| Plastic bowl / bowl guard manual drain      | <b>P32KB00BGM</b> |
| Metal bowl / sight gauge manual drain       | <b>P32KB00BSM</b> |
| Auto drain                                  | <b>P32KA00DA</b>  |
| 5μ particle filter element                  | <b>P32KA00ESE</b> |
| Panel mount nut - aluminum                  | <b>P32KA00MM</b>  |
| Panel mount nut - plastic                   | <b>P32KA00MP</b>  |
| Angle bracket (fits to panel mount threads) | <b>P32KB00MR</b>  |
| T-bracket (fits to body connector)          | <b>P32KA00MB</b>  |
| T-bracket with body connector               | <b>P32KA00MT</b>  |
| Body connector                              | <b>P32KA00CB</b>  |

## Flow Charts

## P32EB 1/4" Filter / Regulator

## P32EB3/8" Filter/Regulator

## P32EB 1/2" Filter/Regulator

**WARNING**

**Product rupture can cause serious injury.  
Do not connect regulator to bottled gas.  
Do not exceed Maximum primary pressure rating.**

**CAUTION:**

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

## Gauges

|                        |                       |                    |
|------------------------|-----------------------|--------------------|
| 50mm (2") round        | 0-60 psig / 0-4 bar   | <b>P6G-ERB2040</b> |
| 1/4" center back mount | 0-160 psig / 0-14 bar | <b>P6G-ERB2140</b> |
|                        | 0-300 psig / 0-20 bar | <b>P6G-ERB2200</b> |

For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

Manual Drain

Automatic Drain

## Most Popular

## P33 Filter / Regulators – Standard

- Integral 1/2" or 3/4" ports (NPT & BSPP)
- High efficiency 5 micron element as standard
- Excellent water removal efficiency
- Robust but lightweight aluminum construction
- Positive bayonet latch to ensure correct & safe fitting
- Secondary pressure ranges
- Secondary aspiration plus balanced poppet provides quick response and accurate pressure regulation

| Port Size | Description / Relieving | Bowl / Drain Type † | Part Number           |
|-----------|-------------------------|---------------------|-----------------------|
| 1/2"      | 125 psig (8 bar)        | Poly / Manual       | <b>P33EA14EGMBNGP</b> |
| 1/2"      | 125 psig (8 bar)        | Poly / Auto         | <b>P33EA14EGABNGP</b> |
| 1/2"      | 125 psig (8 bar)        | Metal / Manual      | <b>P33EA14ESMBNGP</b> |
| 1/2"      | 125 psig (8 bar)        | Metal / Auto        | <b>P33EA14ESABNGP</b> |
| 3/4"      | 125 psig (8 bar)        | Poly / Manual       | <b>P33EA16EGMBNGP</b> |
| 3/4"      | 125 psig (8 bar)        | Poly / Auto         | <b>P33EA16EGABNGP</b> |
| 3/4"      | 125 psig (8 bar)        | Metal / Manual      | <b>P33EA16ESMBNGP</b> |
| 3/4"      | 125 psig (8 bar)        | Metal / Auto        | <b>P33EA16ESABNGP</b> |

† For polycarbonate bowl, see caution in Engineering Section A.

## Flow Charts

## P33EA 1/2" Filter / Regulator

## P33EA 3/4" Filter/Regulator

**WARNING**

**Product rupture can cause serious injury.  
Do not connect regulator to bottled gas.  
Do not exceed Maximum primary pressure rating.**

**CAUTION:**

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

**Gauges**

|                  |                       |                    |
|------------------|-----------------------|--------------------|
| 50mm (2") round  | 0-60 psig / 0-4 bar   | <b>P6G-ERB2040</b> |
| 1/4" center back | 0-160 psig / 0-14 bar | <b>P6G-ERB2140</b> |
| mount            | 0-300 psig / 0-20 bar | <b>P6G-ERB2200</b> |

For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

P32 Lubricators – Compact

- Integral 1/4", 3/8" or 1/2" ports (NPT & BSPP)
- Robust but lightweight aluminum construction
- Proportional oil delivery over a wide range of air flows
- Finger tip ratchet control for precise oil drip rate adjustment
- Fill from top under system pressure

## P31S & P32S Soft Start Valves

- Modular design with 1/4" or 1/2" integral ports (NPT & BSPP)
- The 2-way, 2-position function provides for the safe introduction of pressure
- Adjustable slow start
- Solenoid or air pilot options
- High flow

Parker Global Series Soft Start Valves, provide for the safe introduction of pressure to machines or systems. Soft Start Valves, allow the pressure to gradually build to the set point before fully opening to deliver full flow at line pressure.

The controlled introduction of pressure can be an important safety factor and prevent damage to tooling when air pressure is introduced at machine or system start up.

**Note:** Soft Start Valves must be installed downstream of a 3/2 valve with exhaust capability

## P31T & P32T Combined Soft Start / Dump Valves

- Modular design with 1/4" or 1/2" integral ports (NPT & BSPP)
- Provides for the safe introduction of pressure
- The 3-way, 2-position function automatically dumps downstream pressure on the loss of pilot signal
- Adjustable slow start
- Solenoid or air pilot options
- High flow & exhaust capability
- Silencer included

Parker Global Series Combined Soft Start / Dump Valves, provide for the safe introduction of pressure to machines or systems. Soft Start / Dump Valves when set, allow the pressure to gradually build to the set point before fully opening to deliver full flow at line pressure.

The controlled introduction of pressure can be an important safety factor and prevent damage to tooling when air pressure is introduced at machine or system start up.

To maintain these units in the open position a pilot supply to the air pilot operated version or an electrical signal to the solenoid operated version must be maintained. The valve will automatically dump when the holding signal is removed.

## P33D & P33T Safety Exhaust Valves

- Easy electrical interface with M12 connectors to safety circuit
- External monitoring provides a cost and space saving advantage
- Solid state pressure sensors provide accurate, fast fault detection
- Quick visual LED indicators on the front of the valve
- Superior seated seal design for longer life
- Safety exhaust outlet is no-maintenance and non-clog by design
- Suitable for stand alone use or modular mounting to P32 or P33 FRL assembly
- High B10 life value
- Fast exhaust times allow for smaller machine footprint

(optional soft start)

### Safety Exhaust Valve Function

When applications demand a safe environment you can count on safety valves from Parker Hannifin. The P33 family of safety exhaust valves are 3/2 normally closed valves designed to rapidly exhaust compressed air in the event of a fault condition and to provide monitored coverage ensuring safe function. The P33 is available in two distinct styles, internally\* or externally monitored. The valve is suitable for use up to Category 4, performance level e. Monitoring is achieved externally via a two channel system connected to a safety interface device. Both valves are available with an adjustable soft start and high flow exhaust to shut your equipment down faster when needed. LED's provide clear status of main solenoid operation, sensor power and fault condition for quick visual reference.

### Externally Monitored Valve, Faults and Resets

The externally monitored valve has the monitoring done via a PLC or relay which offers a size and cost advantage over internally monitored valves. The integration of a safety interface into the PLC or relay will help determine the achievable category and performance level of the control system. Customers are required to provide the logic function via the safety device. The valve will lock-out to the "safe state" if asynchronous movement of the valve elements occur which will be detected by solid state pressure sensors. To achieve the proper safety rating, the safety PLC or relay must monitor the solid state pressure sensors to ensure they are not in different states for more than 150ms. If the sensors are in different states for longer than 150ms then the programming logic must shut off power to the solenoids and consider it a fault condition. If during operation the externally monitored P33 enters a fault condition the valve will shut off. A separate reset signal must be incorporated into the logic sequence to avoid automatic restart of the valve. The safety exhaust valves are not for use with clutch or brake applications and are designed for use in conjunction with a safety relay or safety PLC for safe monitoring and fault detection.

### Achieving Desired Performance Level \*\*

The category and performance level (PLr) needed for your machine is determined by a risk assessment of the machinery design and application based on EN ISO 13849-1. The Parker P33 safety valve is designed for those applications requiring a PL of d or e. Please note these levels require other aspects of the system to meet these requirements. As a guide: you can achieve a Cat 4 PL e system by integrating monitoring via a programmable safety rated device. Because the P33 is a mechanical fail-safe device, the monitoring could also be done via a standard PLC and still attain as high as a PL d rating.

Cat 3, PL d

Cat 4, PL e

\* For information on internally monitored safety valves reference Bulletin 0700-B13.

\*\* An integration guide is available to provide further information on connecting the safety valve product to achieve the desired performance level. Please consult Parker and the standard EN ISO 13849-1 for more information.

#### Conditions at Start

The Safety exhaust valve starts with inlet 1 closed to outlet 2 by both valve elements A and B. Outlet 2 is open to exhaust 3. Pressure signals at both sensors SA and SB are exhausted and contacts 1 and 2 of sensors SA and SB are connected. The normally closed sensors both provide voltage feedback signals to the external monitoring system.

#### Normal Operation

During normal operation the two solenoids are simultaneously energized which actuates both pilots and causes valve elements A and B to shift. Inlet 1 is then connected to outlet 2 via crossflow passages C and D. Exhaust 3 is closed. Sensing pressure signals go to each pressure sensor and become equal to inlet pressure. Both sensors contacts open and no voltage signals are provided to the external monitoring system. This indicates that both sides of the valve actuated as expected.

#### Detecting a Malfunction

A malfunction in the system or the valve itself could cause one valve element to be open and the other closed. Air then flows past the inlet poppet on valve element A, into crossflow passage D, but is substantially blocked by the spool portion of element B. The large size of the open exhaust passage past element B keeps the pressure at the outlet port below 2% of inlet pressure. Full sensing air pressure from side A goes to sensor SA, and a reduced pressure goes to sensor SB. This full pressure signal causes SA to open. Sensor SB, with a reduced pressure signal, does not open. An external monitoring system can detect the malfunction by monitoring the outputs of the SA and SB sensors. The external monitor system must then react accordingly by shutting down the power to the valve solenoids and any other components deemed necessary to stop the machine.

## Machinery Directive - Overview

The Machinery Directives' goal is to protect people and the environment from accidents caused from all types of machinery. Based on the standard EN 13849 [safety of machines; safety-related parts of control systems] these standards build the procedure to assess safety-related control systems.

Required Performance Level (PLr) based on a risk assessment are now commonly used to determine the safety level required for the controls system, for the application of machinery.

Performance Level (PL) based on the original B, 1,2,3,4 safety categories, diagnostic capabilities, Mean time to dangerous failure (MTTFd), and common cause failure (CCF), define safety levels of a given safety function. This ensures that safety is not just focused on component reliability, but instead introduces common sense safety principles such as redundancy, diversity, and fail-safe behavior of safety related control parts.

The new EN 13849 standards of the Machinery Directive dictates the machine is safe when the Performance Level of the safety control circuit is equal to or greater than the Required Performance Level of the application. When determining the required performance level, the greater the risk, the higher the requirements of the control system.

$$PLr < PL$$

=

### Determining PLr According to EN 13849-1

The level of each hazardous situation is classified in five Performance levels from a to e. With PL a the control functions contribution to risk reduction is low, while at PL e it is high. The risk graph above can be used as a guideline to determine the required performance level PLr for safety function.

### Risk Parameters

#### (S) Severity of injury

- S1 Slight (normally reversible injury)
- S2 Serious (normally irreversible injury, or death)

#### (F) Frequency and / or duration of exposure to hazard

- F1 Seldom to less often and / or brief
- F2 Frequent to continuous and / or long

#### (P) Possibility of avoiding the hazard

- P1 Possibility of avoiding the hazard
- P2 Scarcely ever possible

### Determining PL According to EN 13849-1

Determining the PL = Performance Level

Determining the MTTF<sub>d</sub> = Mean Time To Dangerous Failure

|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Category B | When a fault occurs it can lead to the loss of the safety function.                                                                                                                                                                         |
| Category 1 | Same that Category B, but loss of the safety function is less likely thanks to a good MTTFd of each channel.                                                                                                                                |
| Category 2 | System behavior allow that the occurrence of a fault can lead to the loss of the safety function between the checks; the loss of the safety function is detected by the check.                                                              |
| Category 3 | A single fault in any of safety related parts does not lead to the loss of the safety function. Whenever reasonably possible the single fault shall be detected at or before the next demand upon the safety function. (Means redundancy)   |
| Category 4 | Same as Category 3, but if detection of single fault is not possible on or before the next demand upon the safety, an accumulation of these undetected faults shall not lead to the loss of the safety function. (Means redundancy & check) |

## Ball Valves / Lockout Valves

The Ball / Lockout Valve shuts off downstream line pressure in the closed position with a 90° turn of the handle. In the closed position, inlet air pressure is blocked and downstream / system air is exhausted through a threaded port. To prevent unauthorized adjustment, the padlock slide may be assembled on either side. It is recommended that this slide is installed after final system assembly.

The Safety Lockout valves conform to OSHA #29 CFR part 1910 – control of hazardous energy source (lockout / tagout).

**Note:** This padlock slide is a permanent assembly and may not be removed later; any unauthorized tampering will void any warranty claims. The valve can only be locked in the closed position.

### Ordering Information:

| Model Type | Port Size | Exhaust Port | Flow scfm (dm <sup>3</sup> /s, ANR) | Modular Ball Valve Flow from Left to Right |

### Transients

Interrupting the current through the solenoid coil produces momentary voltage peaks which, under unfavorable conditions, can amount to several hundred times the rated operating voltage. Normally, these transients do not cause problems, but to achieve the Maximum life of relays in the circuit (and particularly of transistors, thyristors and integrated circuits) it is desirable to provide protection by means of voltage-dependent resistors (varistors). All connectors/cable plugs EN175301-803 with LED's include this type of circuit protection.

### Materials

#### Pilot Valve

|                 |                                 |
|-----------------|---------------------------------|
| Body:           | Polyamide                       |
| Armature tube:  | Brass                           |
| Plunger & core: | Corrosion resistant Cr-Ni steel |
| Seals:          | Fluorocarbon                    |
| Screws:         | Stainless steel                 |

#### Coil

|                         |                                                           |

## P3Y System

The P3Y system allows units to be connected together without the use of pipe connectors. This saves space, provides constant mounting centers, and maintains a modern aesthetically pleasing appearance.

The P3Y filters are specially designed to efficiently filter out rust, dirt, moisture and other impurities from compressed air lines. Operation is fully automatic with a minimum of pressure drop. Coalescing filters and adsorber filters for high purity air are also included in the P3Y series.

The P3Y regulators are designed to provide quick response and accurate pressure regulation for the most demanding hi-flow industrial applications.

The rolling diaphragm was designed for long trouble-free operation and will not rupture or tear under high cycle or demanding applications. The P3Y mist lubricators are designed to provide lubrication for many general purpose applications.

## P3Y Particulate Filter - Large

- Integral 3/4" or 1" ports (NPT & BSPP)
- High efficiency particulate element as standard
- Excellent water removal efficiency
- Robust but lightweight aluminium construction
- Low temperature -40°C (-40°F) with combined manual / semi-auto drain as standard

Manual drain

Auto drain

## P3Y Coalescing and Adsorber Filters - Large

- Extended high efficiency filter element provides greater filtration surface area.
- Integral 3/4" or 1" ports (BSPP & NPT)
- Removes liquid aerosols and sub micron particles
- Oil free air for critical applications, such as air gauging, pneumatic instrumentation and control
- Adsorber activated carbon element removes oil vapors and most hydrocarbons
- Robust but lightweight aluminum construction

**Notes:** To optimize the life of the coalescing element, it is advisable to install a P3YFA pre-filter with a 5 micron element upstream of the coalescing filter.

To optimize the life of the adsorber element, it is advisable to install a P3Y coalescing 0.01 micron filter upstream of the adsorber filter.

**WARNING**

**Product rupture can cause serious injury.  
Do not connect regulator to bottled gas.  
Do not exceed Maximum primary pressure rating.**

**CAUTION:**

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

## (1") Regulator

Most Popular

P3Y Pilot Operated Regulator - Large

- Integral 3/4" or 1" ports (BSPP & NPT)
- Pilot controlled regulators can be mounted "out of reach" with pilot regulator installed in a convenient location
- Constant pilot bleed control for accurate pressure control
- Balanced poppet provides quick response
- High flow

| Port Size | Description              | Part Number        |

| Seals               | Nitrile NBR           |
| Screws              | Zinc plated steel     |

**WARNING**

Product rupture can cause serious injury.  
Do not connect regulator to bottled gas.  
Do not exceed Maximum primary pressure rating.

## Flow Characteristics

## 3/4" and 1" Pilot Regulator

mm (Inches )

## P3Y Filter / Regulator - Large

- Integral 3/4" or 1" ports (BSPP or NPT)
- High efficiency element as standard
- Excellent water removal efficiency
- Robust but lightweight aluminium construction
- Secondary pressure ranges 12 and 16 bar
- Rolling diaphragm for extended life
- Secondary aspiration plus balanced poppet provides quick response and accurate pressure regulation.
- Reverse flow / relieving option
- Low temperature -40°C (-40°F) with combined manual / semi-auto drain as standard

**WARNING**

**Product rupture can cause serious injury.  
Do not connect regulator to bottled gas.  
Do not exceed Maximum primary pressure rating.**

**CAUTION:**

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

\* Note: For 1-1/2" ported unit, please order P3YKA\*BCP port block kit separately.

**WARNING**

**Product rupture can cause serious injury.**  
**Do not connect regulator to bottled gas.**  
**Do not exceed Maximum primary pressure rating.**

**CAUTION:****REGULATOR PRESSURE ADJUSTMENT -**

The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

Most Popular

## Popular Combination Dimensions mm (inches)

## P3Y Combined Soft Start / Dump Valve - Large

- Modular design with 3/4" & 1" integral ports (BSPP or NPT)
- Provides for the safe introduction of pressure
- Automatically dumps downstream pressure on the loss of pilot signal
- Adjustable slow start
- Solenoid or air pilot options
- High flow & exhaust capability

P3Y Series Combined Soft Start / Dump Valves, provide for the safe introduction of pressure to machines or systems. Soft Start / Dump Valves when set, allow the pressure to gradually build to the set point before fully opening to deliver full flow at line pressure.

The controlled introduction of pressure can be an important safety factor and prevent damage to tooling when air pressure is introduced at machine or system start up.

## Combined start / stop function

## Combined start / stop function with acknowledgement

## P3Y Modular Ball Valve - Large

- Positive bubble tight shut-off
- 90° turn handle to prevent unauthorized adjustment
- Pad lockable (up to 6 times)
- When the inlet pressure is turned off the downstream vents through the exhaust port

Ball / Lockout Valve shuts off downstream line pressure in the closed position with a 90° turn of the handle. In the closed position, inlet air pressure is blocked and downstream / system air is exhausted through a threaded port. To prevent unauthorized adjustment, the padlock slide may be assembled on either side. It is recommended that this slide is installed after final system assembly.

The Safety Lockout valves conform to OSHA #29 CFR part 1910 – control of hazardous energy source (lockout / tagout).

| Insulation class    | F                                                   | F                                                   |
| Electric connection | B Industrial                                        | DIN 43650A                                          |
| Protection          | IP65                                                | IP65                                                |
| Approval            | UL/CSA                                              |                                                     |
| Working media       | All neutral media such as compressed air            |                                                     |

\* Limited to 50°C if use with 100% duty cycle

## Solenoid Coils with M12 Connection

| Voltage        | Part Number     | Weight (Kg) |
|----------------|-----------------|-------------|
| Direct current |                 |             |
| 24VDC          | <b>P2FC6449</b> | 0.065       |

## Transients

Interrupting the current through the solenoid coil produces momentary voltage peaks which, under unfavorable conditions, can amount to several hundred times the rated operating voltage. Normally, these transients do not cause problems, but to achieve the Maximum life of relays in the circuit (and particularly of transistors, thyristors and integrated circuits) it is desirable to provide protection by means of voltage-dependent resistors (varistors). All connectors/cable plugs EN175301-803 with LED's include this type of circuit protection.

## Materials

## Pilot Valve

|                 |                                 |
|-----------------|---------------------------------|
| Body:           | Polyamide                       |
| Armature tube:  | Brass                           |
| Plunger & core: | Corrosion resistant Cr-Ni steel |
| Seals:          | Fluorocarbon                    |
| Screws:         | Stainless steel                 |

## Coil

|                         |                                                           |

Spare Base Solenoid Pilot Operator  
CNOMO NC

| Description                 | Part Number      | Weight (Kg) |
|-----------------------------|------------------|-------------|
| Non-lock<br>Manual Override | <b>P2FP23N4B</b> | 0.065       |
| No Override                 | <b>P2FP23N4A</b> | 0.065       |

**Note:** Solenoid pilot operators are fitted to the Global range. Order the above part numbers for spares. The operators are supplied with mounting screws and interface 'O' rings. Coils and connectors must be ordered separately.

## Solenoid Coils with DIN A or Industrial B Connection
