CONTRAST ADJUSTMENT

Both displays EA DIP081-CNLED and -CHNLED do have an driving voltage for contrast of typ. 4,9V. For 3.3V operation additional -3.3V is required.

Version EA DIP081-CHNLED for ext. temperature range -20..+70°C does have a built-in temperature compensation; so there's no need for contrast adjustment while operation.

BACKLIGHT

Backlight do need an external resistor limiting the current limitor. Calculation is: $R=U/I$, so at 5V supply:

$$R_{\text{gelb/grün}} = (5,0V - 4,1V) / 0,15A = 6 \text{ Ohm}$$

Caution: do never drive backlight direct with 5V; damage may come suddenly.

CREATING YOUR OWN CHARACTERS

All these character display modules got the feature to create 8 own characters (ASCII Codes 0..7) in addition to the 192 ROM fixed codes.

1.) The command "CG RAM Address Set" defines the ASCII code (Bit 3,4,5) and the dot line (Bit 0,1,2) of the new character. Example demonstrates creating ASCII code \$00.

2.) Doing 8 times the write command "Data Write" defines line by line the new character. 8th. byte stands for the cursor line.

3.) The new defined character can be used as a "normal" ASCII code (0..7); use with "DD RAM Address Set" and "Data Write".

Set CG RAM Address				Data							
Adresse		Hex		Bit							
7	6	5	4	3	2	1	0	Hex			
0	1	0	0	0	0	0	0	\$04	X	X	X
				0	0	1	0	\$04			
				0	1	0	0	\$04

				1	0	0	0	\$15			
				1	0	1	0	\$0E			
				1	1	0	0	\$04
