

Magnetic Label Holders — 'C' Profile

Easily applied to steel surfaces, often in warehouse stock locations. This product can be easily cut to size from the roll and then quickly applied and repositioned as required. A card label is inserted into the holder. The whole system is designed to be reused so can be as temporary or permanent as you desire, and is therefore a very economical solution.

Our flexible magnetic profiles are made by adding strontium ferrite magnet to a flexible thermo-plastic binder which is then extruded through the relevant die to achieve the profile required. The result: a flexible strong, durable material with many potential uses.

Magnetic 'C' Profile (roll length 50m)

Product No.	Width
FM676C	25mm
FM677C	30mm
