|---------------|-------------------------|--|--|---|---------|---------|
|               | A 1227                  | 1-phase flexible current<br>clamp 3000/300/30<br>A / 1 V | Single phase flexible current clamp with three selectable measuring ranges. Current clamp is automatically recognized by the instrument. Clamp does not require external power supply as it is powered by the measuring instrument.                                  | ٠ | •       | •       |
|               | A 1445                  | 1-phase flexible current<br>clamp<br>3000/300/30 A / 1 V | Single phase flexible current clamp with three selectable measuring ranges. Current clamp is automatically recognized by the instrument. Clamp does not require external power supply as it is powered by the measuring instrument.                                  | • | •       | •       |
|               | A 1446                  | 1-phase flexible current<br>clamp<br>6000/600/60 A / 1 V | Single phase flexible current clamp with three selectable measuring ranges. Current clamp is automatically recognized by the instrument. Clamp does not require external power supply as it is powered by the measuring instrument.                                  | • | •       | •       |
|               | A 1287                  | 1-phase flexible<br>current clamp<br>3000/300/30 A / 1 V | Single phase flexible current clamp with three selectable measuring ranges. Powered by alkaline or rechargeable batteries.   | • | •       | •       |
| On the second | A 1037                  | Current transformer<br>5 A / 1 V                         | 3-phase transformer for power measurements on distribution panels with 5 A nominal output current.   | • | •       | •       |
|               | A 1354                  | Temperature probe  | Temperature probe can be used for monitoring and recording of temperature trend at measuring objects, such as capacitors, motors, transformers, etc.   | • | •       | •       |
|               | A 1479                  | Wide range power<br>supply                               | Wide range power supply (Unom: $85V \div 650  \text{Vac} / 920  \text{Vdc}$ ) provide power supply directly from voltage measuring terminals. Applicable when standard electrical sockets are not available on measurement site.                                     | • | •       | •       |
|               | A 1355                  | GPS receiver   | The PQA instrument, current clamps, wide range power supply, 3G/WiFi-Router and GPS are not included in the set.   | • | •       |         |
|               | A 1622                  | 3G / Wi-Fi Router  | 3G and Wi-Fi Router enables remote handling of the measuring instrument and its data. If the measuring instrument has to be located on distant or hardly accessible place, the 3G and Wi-Fi Router is the only practical solution for fast access to the instrument. | • | •       |         |
| <b>&gt;</b>   | A 1198                  | Magnetic contact probe                                   | Test probe with magnetic contact provides reliable contact with metal surface during the measurement.  | • | •       | •       |
|               | A 1014                  | Test probe, black  | Test probe with fi 4 mm connection is suitable for performing measurements both in mains outlets and in situations when no schuko outlet is present.   | • | •       | •       |
